

Appendix I

Aircraft Type Ratings for NCAR Part-66 Aircraft Maintenance Licence

The following aircraft type ratings should be used by CAA Nepal. The type rating will be endorsed in the NCAR Part-66 AML for the aircraft registered in Nepal only.

This list is based on EASA Type rating list published by EASA ED Decision 2015/020/R that is regularly updated by EASA and List of Type Certificate Acceptance by CAA Nepal. The CAA Nepal will visit the EASA website to identify the latest changes and CAA Nepal Type Certificate Acceptance list to update this list.

This Appendix I Issue 4 dated September 2020 has been prepared after Issue 01 Rev 01 to align the issue no. of this document with NCAR Part-66 Issue 4 dated September 2020.

Notes on when the licences should be modified:

When a modification is introduced by this Decision to an aircraft type rating or to an engine designation in the rating which affect licences already issued, the ratings on the Aircraft Maintenance Licences (AMLs) may be modified at the next renewal or when the licence is reissued, unless there is an urgent reason to modify the licence.

Notes on aircraft modified by Supplemental Type Certificate (STC):

- This Appendix I intends to include the type ratings of aircraft resulting from STCs for installation of another engine. These STCs are those approved by the CAA Nepal. Other STCs than those for engines are not considered.
- However, the ratings from STCs for installation of an engine:
 - on part of the original airframe models, or
 - from the same manufacturer, but of a type very similar to the original one, have not been added because they would have resulted in an already existing rating.

In the following tables:

- The column '*TC Holder*' includes the TC holder as defined in the Type Certificate Data Sheets (TCDS) (EASA, FAA or other) or the Specific Airworthiness Specifications (SAS).
- The column '*STC Holder*' includes the STC holder as defined in the Supplemental Type Certificate Data Sheets (STCDS) (EASA, FAA or other).
- Some TC holders' designations have been corrected to add the information: 'Aircraft with an SAS', this means that the aircraft listed under this TC holder designation is considered an 'orphan aircraft'.
- In Group 3, a third column has been added which is called 'Type of structure' and which intends to assist the CAA Nepal in identifying the experience required for this type with a view on removing existing limitations on the licence.
- Wooden structure covered with fabric is considered to fall under wooden structure. For aeroplanes with a combination of structures, e.g. metal tubing fuselage and wooden wings, both experiences 'metal tube covered with fabric' and 'wooden structure' are required.
- In Group 3, a fourth column has been added which is called 'MTOM' and which intends to assist the competent authorities in identifying the aeroplanes types where the Maximum Take-Off Mass (MTOM) is:
 - above 2T and is subject to a B1.2 licence, or
 - 2T and below and is subject to a B1.2 or B3 licence.

List of aircraft type ratings for Appendix I to AMC to Part-66

Group No	A=aeroplane H=helicopters	TC/STC holder	Model	Commercial Designation or Type of structure (for Group 3)	Part-66 Type rating endorsement	MTOM (For Group 3)
